### 1. CHAPTER II Q.17

**1. Show that (2, 4), (3, 0), (5, 3) and (4, 7) are the vertices of a Parallelogram.**

**Solution:**

let

$$\mathbf{A} = \begin{pmatrix} 2 \\ 4 \end{pmatrix}, \mathbf{B} = \begin{pmatrix} 3 \\ 0 \end{pmatrix}, \mathbf{C} = \begin{pmatrix} 5 \\ 3 \end{pmatrix}, \mathbf{D} = \begin{pmatrix} 4 \\ 7 \end{pmatrix} \quad (1)$$

$ABCD$  can be a ||gm if its opposite sides are parallel  
i.e

$$\mathbf{A} - \mathbf{B} = k_1(\mathbf{D} - \mathbf{C}) \text{ and } \mathbf{A} - \mathbf{D} = k_2(\mathbf{B} - \mathbf{C}) \quad (2)$$

$$\mathbf{A} - \mathbf{B} = \begin{pmatrix} -1 \\ 4 \end{pmatrix}, \quad \mathbf{D} - \mathbf{C} = \begin{pmatrix} -1 \\ 4 \end{pmatrix} \quad (3)$$

$$\mathbf{A} - \mathbf{D} = \begin{pmatrix} -2 \\ -3 \end{pmatrix}, \quad \mathbf{B} - \mathbf{C} = \begin{pmatrix} -2 \\ -3 \end{pmatrix} \quad (4)$$

From Equation number 3 and 4,

$$\begin{aligned} \mathbf{A} - \mathbf{B} &= (1)(\mathbf{D} - \mathbf{C}) \text{ and} \\ \mathbf{A} - \mathbf{D} &= (1)(\mathbf{B} - \mathbf{C}) \end{aligned} \quad (5)$$

Here Opposite sides  $AB \parallel CD$  and  $AD \parallel BC$   
 $\therefore ABCD$  is a ||gm as the opposite sides are parallel.
